

Project Testing Phase

Epic 5: Project Execution

- Install Postman or ThunderClient (VS Code extension).
- Start the backend server:

“npm start”

API Testing

API testing ensures that every endpoint functions correctly and returns the expected response. The FitTrack AI is tested using **Postman**, allowing developers to verify request handling, authentication, database operations, and AI integration.

Testing is performed in the following order:

1. Authentication APIs
2. Workout APIs
3. AI APIs

2 "insight": "Averaging 45 minutes across 18 workouts shows exceptional consistency and a highly sustainable burn rate of roughly 344 calories per session. Maintain this steady foundation while introducing progressive overload or short high-intensity intervals to one workout each week to push past plateaus. Prioritize active recovery and balanced nutrition between these sessions to turn this strong momentum into lasting strength and endurance."
