

Project Documentation Phase

Documentation is the process of preparing a complete record of the project.

It explains the purpose and objectives of the project.

It includes the problem statement identified for the project.

It describes the software and hardware requirements.

It explains the system design and architecture of the project.

It describes the development and implementation process.

It includes the testing methods and test results.

Output screenshots are added to show the working of the project.

It contains the conclusion and future enhancements of the project.

Finally, all the information is compiled into a Final Project Report (PDF).
